Rapid Loss of Polar Ice

Polar ice caps are melting at an accelerating rate, with Greenland losing over 270 billion tons of ice every year.

Ecosystems Under Threat

The last decade has been the hottest on record. Arctic sea ice is shrinking by nearly 13% per decade, pushing species like polar bears toward extinc-tion.
Over 1 million species are at risk due to climate change.

1950 1960 1970 1980 1990 2000s 2026

A Damaged Future

- Flooded cities
- Extreme heatwaves
- Polluted air & water
- Unlivable Conditions for both humans and animals

A Sustainable Future

- Reduce Carbon emmissions
- Transition to renewable energy
- Protect ecosystems & wildlife
- Support sustainable living

-13 per decade

+1.1C global increase

Habitats disappearing

Which Will You Choose?

For millions of years, Earth's climate changed slowly. Today, it's changing faster than ever before. By taking action, we can still shape the course] of our future.
